Amendment B

Honorable Commissioner of  
Patents and Trademarks  
Washington, D.C. 20231

Sir:

In response to the Office Action mailed 2005, April 8, please and the above application  
as follows:

In the Claims:

1-28 (cancelled)

29. (new) A device comprising:

a load cell; with curves in the side of said load cell to equalize the strains on the load cell when an applied load is applied, wherein material is removed from the load cell sides above and below a strain gage to form said notches, where said strain gages are connected to the load cell and in close proximity to each other forming a thin gaging web, where large strains generated by one body are imparted to another body on which strain gages are mounted, increasing the transverse strain at the gage location on the second body above that which could be achieved with Poisson's ratio., where said strain gage(s) are located on a surface of the load cell that is perpendicular to the load cell, where said load cell has a connecting means on the top and bottom of said load cell., where said plurality of strain gages have the same absolute strain producing linearity, where said plurality of strain gages are mounted near each other.

**REMARKS - General**

By the above amendment, Applicants have amended the title to emphasize the novelty of the invention.

The present invention including achieving a load cell that provides improved linearity and temperature transient behavior which O'Brien U.S. Patent No. 5,222,398 did not. The current invention was designed to solve the issues of the linearity and temperature performance of S-cells that O'Brien did not address. The current invention was also designed to work specifically with chain tension.

Also applicants have rewritten all claims to define the invention more particularly and distinctly so as to overcome the technical rejections and define the invention patentably over the prior art.

**Conclusion**

For all of the above reasons, applicant submits that the specification and claims are now in proper form, and that the claims all define patentably over prior art. Therefore the applicant submits that this application is now in condition for allowance, which action is respectfully solicited.

Respectfully submitted,

Jeffrey M. Furr, Esq.
